

## **FIL CONTROL – Sensor Expert**

### ***Hall 6 Stand B203***

For nearly 40 years, Fil Control has been developing and producing yarn sensors and yarn cutters for the textile machinery industry.

With Fil Control headquarters in France and Fil Control subsidiary in China for the Asian market, the company is staffed with the most competent team members in order to provide all customers with the highest quality products at the best price.

We put all our effort and energy to understand and design technological and commercial answers to the Textile Industry's constant evolution.

All around the world, major textile manufacturers are trusting in Fil Control solutions in its 3 major fields:

- yarn Cutters, which can satisfy all kinds of personalized and bespoke demands,
- yarn Sensors, utilizing capacitive, optical, reflective, piezoelectric and strength gauge technology,
- hall Effect Sensors, installed on numerous different kinds of application, such as motor rpm counting.

For ITMA 2019, we will be proud to present to you our new step forward in the **optical detection R&D**. Indeed, we can now detect yarn thinner than ever before, with to-and-fro motion but also with linear motion.

On top of it all, we will make you discover how our sensors and communication programming ability will follow the textile machinery manufacturer development into the 4.0 industry.

Technology leader, costs effective solution, high reliability, Fil Control is your sensor expert.
