

### **SCHAEFFER Productique ITMA 2019 (UCMTF)**

In the era of industry 4.0, intensive dematerialization, digital tools are an essential asset to meet new market expectations: traceability, sustainability and flexibility.

SCHAEFFER will present exclusively at ITMA Barcelona a new business process management tool. Dedicated to textile companies, it will bring more efficiency and flexibility: cloud integration, artificial intelligence, self-adaptive, user-oriented.

A true 4.0 economy management system, it communicates with the standardized platform for digital services and traceability EcolTex® (eBIZ 4.0 - European approval).

ITMA 2019 is an opportunity to show the power of this tool designed with the most advanced technologies. It is accessible to large groups as well as small and medium-sized textile companies. This will allow them to better satisfy their market while minimizing the required resources, thus combining performance, ecological footprint and inter-business networking, CSR management and a first step into the world of circular economy.
