

## SPOOLEX GROUP AT ITMA 2019

SPOOLEX GROUP

This year again, Spoolex Group will exhibit at ITMA 2019, booth B209 Hall 1 to present its well-know brands.

### **More than a machine manufacturer**

Calemard, is the Converting Machinery Division of Spoolex Group. Present since 1955 on a wide range of markets, Calemard has focused its activities on highly technical cutting applications. Always based on modular design each equipment is multi-purposes and can convert thick or thin materials into pads or spools of wide or narrow strips. Our technical and process expertise have allowed us to develop and equip machines with sensitive web tension control and guiding systems, to manage, depending on the product to be converted, high, low and even extremely low tension on the same machine. The result is compact rolls with consistent tension, clean and straight edges for easy use on the downstream product manufacturing process.

### **Decoup+, the specialist in ultrasonic cutting and welding**

Ultrasonic technology offers various advantages: it performs clean and soft edges, without fraying, overthickness, burning or yellowing, but also strong and regular weldings without any additional material. Ultrasonic can be used on any synthetic fabrics (with minimum synthetic fiber content). Quick and aesthetic, this technology allows a direct use of the final product. Present since 1975 on the market with a complete industrial range, Decoup+ offers compact and ergonomic devices used at any step of the production process: from looms, to final make-up operations.

### **Not a simple roller**

Roll Concept is the Industrial Rollers division of the Group. For almost 40 years, we design and manufacture industrial rollers, cylinders and winding cores. Specially engineered to improve process performance and increase line speed on web handling and converting industry, our lightweight precision rollers and winding cores ensure to users easy installation, easy handling and durability.
